AIR EXCELLENT CLICK-SEAL RING

One click away from faster installation

Patented 2-in-1 solution that locks and seals ducts in one click.

The Air Excellent Click-Seal ring is an innovation within the Air Excellent circular duct system. It replaces the traditional click ring and separate seal with a **patented 2-in-1 solution**, combining mechanical locking and airtight sealing into a single component.

Pre-installed in compatible accessories, the Click-Seal ring allows installers to connect ducts quickly and securely with one simple action. The integrated seal ensures **ATCI airtight performance**, while fewer loose parts help reduce installation time and minimize the risk of assembly errors.

The result is a secure, airtight, and mechanically reliable connection maximizing efficiency on site, all just **one click away**.

Key benefits

Connect in seconds

The duct simply clicks into place, creating an immediate mechanical hold and airtight seal with one straightforward movement.

Patented all-in-one design

The patented Click-Seal technology combines locking and sealing into a single integrated component. Fewer parts mean simpler handling and a more efficient installation process.

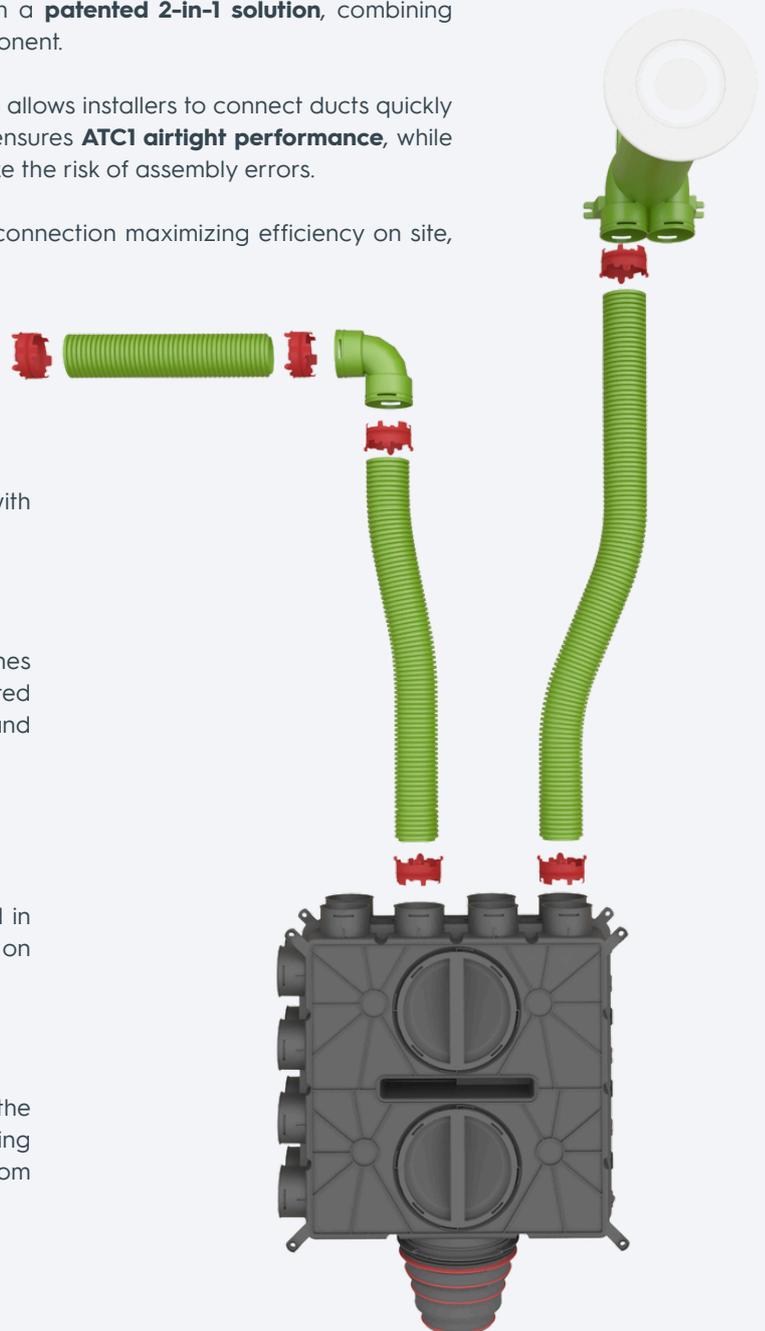

Work faster with greater confidence

With fewer steps and the seal already positioned in the accessory, installation is quicker and easier on site.

Performance you can trust

Engineered to achieve ATCI airtightness, the integrated seal delivers dependable, long-lasting performance across the Air Excellent system; from distribution boxes to valve connections.

AIR EXCELLENT CLICK-SEAL RING

One click away from faster installation

Patented 2-in-1 solution that locks and seals ducts in one click.

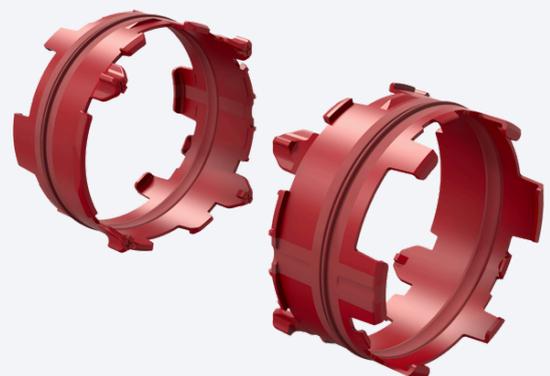

Why Upgrade to Click-Seal ring?

The Air Excellent Click-Seal ring simplifies duct connections by combining multiple components into one smart solution helping you install faster while improving reliability on site.

Feature	Click-Seal ring	Previous Click ring + seal
Components	Single ring with integrated sealing lip	Separate mechanical ring and loose sealing element
Installation steps	One-step duct insertion with audible click confirmation	Multi-step: insert ring, align seal, insert duct
Installation time	Significantly reduced due to fewer handling steps	Longer due to separate components and several installation steps
Risk of errors	Minimal - integrated seal prevents misalignment	Higher - manual placement of separate seal can fail
Airtightness	Built-in seal achieves consistent ATC1 airtight performance	Dependent on correct placement of separate seal
Handling on site	Simple, ready-to-use component, no additional tools required	Requires careful handling and assembly of multiple parts

Seamless compatibility with Air Excellent

The Air Excellent Click-Seal ring integrates seamlessly into the Air Excellent circular duct system and is delivered pre-installed in compatible accessories. It is available for three sizes: AE23C (63mm), AE34C (75 mm), and AE48C (90 mm), providing a faster connection and reliable ATC1 airtight performance across the system.

Faster installation. Fewer components. Reliable airtight performance.
Everything you need one click away.
